

Re: PCB Supply

25th January, 2001.

To Whom It May Concern:

Leaf Technologies Limited has been a long standing contract manufacturer to Lucent Technologies and other notable OEM's in the United Kingdom. It is critical to our business that we align ourselves with cost competitive/quality conscientious suppliers to support our business requirements. Over time, Far East Enterprises has proven to be a supplier of this calibre.

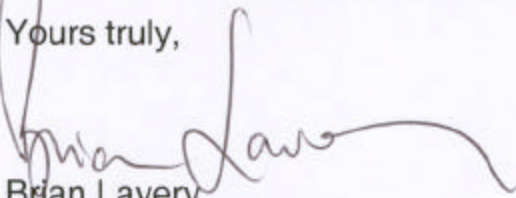

Far East Enterprises has been supplying D/S and Multilayer PCB technology required for our Lucent Technologies' contract for approx. 3 years, and to date, our relationship with Far East Enterprises has been without incident.

Furthermore, Far East Enterprises have created sizeable price incentives in the tune of an overall reduction of 15% per annum over our previous supplier, resulting in annual savings of \$250,000.

In addition to the above, Far East Enterprises is very active in after-manufacturing services, currently providing a buffer stock/consignment program which has lead to a substantial decrease in inventory carrying costs and an enhanced response time to our JIT/BTO manufacturing programs.

It is with this, that I gladly and confidently recommend Far East Enterprises for those interested in seeking cost effective/quality-sensitive PCB technology alternatives.

Yours truly,

Brian Lavery
Procurement & Materials Manager.
